

# Wireless Hybrid Payment System

Accept Cards. Keep Coins. No Minimums. No Lock-ins.

## Pay at the Pump for your Washers and Dryers

Your customers will be thrilled when they have the ability to walk right up to a machine, load their clothes then start the cycle with their credit card. Your customers will no longer have set spending limits based on cash-in-pocket and no more last-minute ATM runs. Customers that pay with their credit card will buy more loads, upgrade to higher priced machines, and buy more bonus dry time than your cash customers. In a business in which you are selling time, there is not a quicker or more convenient way for your customers to pay. *Start with your biggest machines and expand at your own pace!*

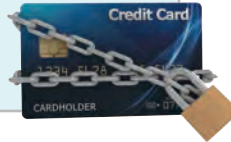

### Coin and Card

Your customers will have the option to use cash OR card on any machine you choose to retrofit with a reader.

### Control Your Rates

You can pick who you use for credit card merchant processing. This means no lock-ins and the ability to switch processors if you find a better deal on rates.

### No Minimums

No artificial limits to force you to buy more readers than you are comfortable with. This means taking it slow and expanding over time is possible.

### Wireless Install

Your installation is quick and simple using our secure wireless technology. No external antennas, and easy to expand as demand increases.

### Web-based Admin

Change prices, see how much money you've made, run reports, set time-of-day promotional pricing all from the web. Just like online banking!

### Remote Activation

No more mailing refunds or driving down to the laundromat for customers. You can activate your wash equipment remotely via the web.

### Loyalty Card Option

There is an optional customer loyalty card program that can be sold by an attendant or an automated card dispensing and revalue station. Supports multi-location businesses.
